DETAILED ACTION

Response to Amendment

The amendment filed on March 3, 2008, has been entered and acknowledged by the Examiner.

Claims 13, 16, 18, 20, and 21 are pending in the instant application.

Allowable Subject Matter

Claims 13, 16, 18, 20, and 21 are allowed.

Regarding independent claim 13, the references of the Prior Art of record fail to teach or suggest the combination of the limitations as set forth in claim 13, and specifically comprising the limitation wherein an inorganic electroluminescent device comprises a substrate, a transparent electrode on one surface of the substrate, an inorganic light-emitting layer on a side of the electrode opposite to the substrate, a dielectric layer on a side of the inorganic light-emitting layer opposite to the electrode, an electron field emission enhancing layer on a side of the dielectric layer opposite to the inorganic light emitting layer, a back electrode located on a side of electric filed emission enhancing layer opposite to the dielectric layer, wherein the electron field emission enhancing layer includes (i) carbon nanotubes or (ii) nanoparticles.

Regarding independent claim 16, the references of the Prior Art of record fail to teach or suggest the combination of the limitations as set forth in claim 16, and specifically comprising the limitation wherein an inorganic electroluminescent device

comprises a layered structure comprising a first electrode, a first dielectric layer adjacent the first dielectric layer, an inorganic light-emitting layer adjacent the first dielectric layer, a second dielectric layer adjacent the inorganic light-emitting layer, and a second electrode adjacent the second dielectric layer; and a substrate adjacent the layered structure, wherein the layered structure includes an electron field emission enhancing layer at an interface between an electrode and a dielectric layer located at least at one location from the list of locations of a location between the first electrode and the first dielectric layer and a location between the second electrode and the second dielectric layer, wherein the electron field emission enhancing layer includes (i) carbon nanotubes or (ii) nanoparticles.

Regarding independent claim 18, the references of the Prior Art of record fail to teach or suggest the combination of the limitations as set forth in claim 18, and specifically comprising the limitation wherein an inorganic electroluminescent device comprises first and second substrates arranged opposite each other, a transparent electrode on the first substrate, an inorganic light-emitting layer on the transparent layer, a dielectric layer on the light-emitting layer, a back electrode on the second substrate, and an electron field emission enhancing layer on the back electrode and in contact with the dielectric layer on the first substrate, wherein the electron field emission enhancing layer includes (i) carbon nanotubes or (ii) nanoparticles.

Regarding independent claim 20, the references of the Prior Art of record fail to teach or suggest the combination of the limitations as set forth in claim 20, and specifically comprising the limitation wherein an inorganic electroluminescent layer comprises first and second substrates arranged opposite each other, a transparent electrode located adjacent the first substrate, a first electron field emission enhancing layer adjacent the transparent electrode located at an interface between the transparent electrode and a first dielectric layer, the first dielectric layer located adjacent the transparent electrode, an inorganic light-emitting layer located adjacent to the first dielectric layer, a second electron field emission enhancing layer located adjacent the inorganic light-emitting layer located at an interface between the inorganic light-emitting layer and a back electrode, the back electrode adjacent the second electron field emission enhancing layer, and a second dielectric layer located adjacent the back electrode, wherein at least one of the first and second electron field emission enhancing layers includes (i) carbon nanotubes or (ii) nanoparticles.

Regarding claim 21, claim 21 is allowable for the reasons given in claim 20 because of their dependency status from claim 20.
